INTRODUCTION.

Welcome to the BlocVault ecosystem project. We are looking forward to the future and take great pride in introducing you to our products and the features of them in this document. The BV ecosystem idea had been in discussion for a long time and the persons behind it have taken a lot of time to look at ways to make investing and holding digital assets easier as blockchain and crypto currency grows across the world. Our BVLT Token which will launch November 2021 will be the first step to achieving our goals for the future. We also believe that trying to sell a product with nothing to back it is a hard task and have undertaken the development of our mobile app already to get a head start on where we are going. Please take the time to read through our whitepaper and thank you for taking your valuable time to be here.

A Little About Us.

The BlocVault project was started by a group of crypto investors and developers who came together through socials and other projects over the past year. Our vision was to change the game together, We believe we have a unique advantage in this space because we have brought together business owners, crypto investors and blockchain developers to create the perfect blend of knowledge for what's in store. Each of us offer something totally different to the project from our professional fields which is extremely beneficial to the BlocVault ecosystem. Our mission is to make life easier for everyone, both everyday investors and also newcomers to the world of blockchain and crypto investing. It doesn't matter if you've been trading and investing in crypto for years or if you've just found out about crypto and want to start investing and building a solid future, We aim to create a suite of mobile and web based apps for every investor. A place to invest, buy and sell, store cryptocurrency and tokens, chat with friends and a lot more!"

The Fun Stuff.

Our first product to market will be our one for all BlocVault wallet (BVW) which will offer a new standard for storing all types of crypto currencies and digital assets under one hat. BVW will offer users the freedom to store trade and swap tokens and digital assets (NFT's) instantly. Purchasing new tokens has always been a pain staking task for lots of new holders and investors that are not well experienced with the processes presently. One of our goals is to offer FIAT direct to any token the user holds or adds to their BV wallet. Our revolutionary smart swap function will enable this process to happen making buying and selling your tokens much easier and less confusing. This also offers major advantages to new token owners as we aim to make it easier and faster for users to buy there tokens direct. The next phase of our development research was based around the rise in crypto investors wanting to spend there digital assets on the go, The solution was clear. Our aim is to implement a stable currency exchange that will enable our users to exchange their tokens into some of the worlds most commonly used currencies EUR,GBP,USD,AUD etc and shop with FIAT using our BlocVault debit card in stores all over the world.

Asset Tracking.

Tracking investments and expenditure can be daunting and quite often we need to use different software or applications to do this which can take up valuable time in today's busy world. BVTRACE will allow you to get on with life while keeping all your token transactions, buy in pricing and sell orders on one simple ledger. On the flip side you can also shop with comfort using the BV debit card while we take care of the paperwork in one simple, easy to read monthly statement on your BVW app. Send funds to friends, swap tokens, trade, sell and buy tokens all while you are on the move.

Bridging The Gap.

With the rise of new networks in the crypto space over the past number of years we understand the needs of users to be able to swap from network to network in an instance. BVSWAP gives users that freedom using our cross chain bridge you can swap networks in an instance. Check pricing across networks and move with freedom users will have total control allowing them to invest on multiple networks.

What's Up.

Connecting with friends and people we meet from all over the world on many projects over time has always been a big factor in everyday trading and tracking of tokens etc. BVCHAT will allow users to chat with all their friends and fellow investors from within our app or on the web. Keeping up to date with each other on how projects are going and what's around the corner has always been a big part of the fun and enjoyment we all get from projects. Add friend, send images and videos to friend, make voice and video calls on the go all with ease from within our easy to use next gen wallet app.

Cold Storage.

Protecting assets and moving them offline has been all done before but as an added feature to our app we have developed a cold store as part of our app suite so you can easily move tokens and digital asset of the blockchain and into your own vault. The vault is not connected to any network once it is set up. This gives users a high level of security over their assets as the vault can not be accessed without fingerprint id and two step verification. It has never been easier to keep your assets safe.

NFT Marketplace.

NFTs are fast evolving to be the next wave of digital asset in the blockchain world. Our NFT marketplace will connect directly with the BVW app and allow you to move assets from your vault to the app and onto our marketplace and visa versa. The marketplace will be a place where you can buy, trade or swap with other owners on our platform. From sports to art, music and pixels we aim to develop a next gen marketplace that will capture the hearts and minds of all NFT enthusiasts. The premise is simple it's not what you do its how you do it and we have lots of ideas in store for this part of the project that will be announced at a later date.

BVLT Token.

The BVLT token is a Binance smart chain (BSC) defamatory token. Binance smart chain (BSC) was developed as a means of utilising solidity-based smart contracts with much greater speed and efficiency than other, competing chains. With decentralised exchanges on BSC offering lightning fast swaps and extremely low fees, BSC has started to become one of the most widely used blockchains for decentralised finance (Defi). BSC uses a token protocol developed by the Binance team called BEP-20. The BVLT tokens deflationary nature means that each time a transaction occurs using a deflationary token a percentage of the tokens used in the transactions are destroyed permanently. This function is constantly at work removing tokens from the total available supply. Over time, this action works to help increase the value of each token dramatically as it increases the scarcity of tokens.

Multi-Faceted Profits.

Everyone loves profits. That's why the BVLT Token has multiple mechanisms to bring those profits to your wallet. Firstly, HOLDR rewards provide you with an automatically ever-increasing balance; secondly, a percentage of all swaps and exchanges etc from our products will be redistributed back to the BVLT token to boost the price of each token simultaneously and automatically. A further 15% of the total supply will be burned adding more value to the holders and token price.

Liquidity Locked.

BVLT will lock liquidity to give you the ease of mind that no rug pulls are at play as we take a lot of pride in bringing you our project.

Tokenomics.

A 12% tax will be applied to all buy & sell action of the BVLT token this will be distributed as outlined below. The fact that this is a development company and not a meme token we have decided to allocate funds slightly in favour of sustaining the development side of the project.

2% Automatic Liquidity

As the liquidity pool for BlocVault grows, so does its liquidity and its hedge against price fluctuations. Equipped with a 2% transaction fee on all buy-sell transactions, the pool for BlocVault can always keep growing.

3% Development

This tax is to ensure we have the funding to develop our products and continue to offer our holders and new investors the very best in developments, products and services long into the future.

2% Marketing

As great as BlocVault will be, it cannot achieve its goals without promotion. For that reason, all buy-sell transactions get charged another 2% fee for marketing which helps BlocVault to grow our community.

3% HOLD R Rewards

HOLD R rewards are similar to dividends in the stock market. A 3% fee charged on all buy-sell transactions allows the reward balance to accumulate and gets distributed to all HOLD R s.

2% Buy Back

The buy back function of our token is used to protect the price in heavy sell off periods where deemed fit by the developers of this token.

Roadmap

Phase 1.

- Website Launch
- Social Media Platforms
- Marketing across socials
- Whitepaper Launch
- Build out our community
- Begin Development of our App

Phase 2.

- Register on New token platforms
- Continue Social campaigns
- Techrater Audit.
- Begin PPC campaign's
- Several Token Giveaways
- Pre-Sale of BVLT Token
- Public Launch of BVLT Token
- List on CMC & CG (fast-tracked)
- Trend on DEX & CMC etc.
- Massive marketing push directly with Launch

Phase 3.

3.

- Continue to market BVLT Globally
- Ramp up Development of our App
- Second Audit By Certik
- Listing on Major Exchanges
- Launch of New Website
- Release Merch Store
- Test App for Launch
- Release BVW Wallet.

APP Security.

Security is one of the most important considerations for users, as a compromised account may result in users losing control of their assets. BV Wallet has several levels of security to protect user funds from any possible attacker, including the company itself. Passwords and other digital services like 2 step verification will be used to access all accounts, However, we do not store user passwords, and cannot reset the password if lost. This measure prevents company insiders etc from being able to tamper with customer accounts. If a user forgets or loses their password, the account can only be recovered with a mnemonic seed. Your encrypted account is automatically backed up to our servers. To safely store your wallet, we add another layer of security by encrypting your wallet a second time. Securely storing your wallet on our servers ensures that you can access your wallet from any (and all) of your different devices. It is important to remember that this is a Blockchain product - it is supported by both Android and iOS. The phone version of our wallet app is fully optimised. QR code send and receive within seconds is also on our platforms. We also have an integrated finger touch ID implemented for maximum security. If you lose your phone or if it's stolen, your Blockchain wallet app will be protected by a PIN code. Even if you were to delete the app, all of your digital assets will be stored in our secured database. Mnemonic Seed integration will be used. This is a random string of English words that function similarly to a password. If a user loses access to their phone or device, the seed can be used to restore the wallet, including any cryptocurrencies and assets held by the user. Like passwords, the BlocVault the company does not store users mnemonic seeds. These seeds follow an industry standard. Optional Security Methods In addition to the protections outlined above will be integrated and can be turned on or off in settings within the app. All of our products will have security for the users as first priority and we fully expect security to be upgraded constantly to stay ahead of the criminal acts out there.
